

GUJARAT UNIVERSITY

DEPARTMENT OF BIOCHEMISTRY AND FORENSIC SCIENCE

University School of Sciences

Ahmedabad – 380009, Gujarat, India.

M. Sc. Biochemistry

The recent advances in Biochemistry have proved that the present era is for biochemical research, especially for Molecular Biology. Hence the course which was started in 1995 with the same aim, was revised regularly according to the latest developments and discoveries. An experimental research-based Dissertation was made compulsory along with a viva-voce examination which was introduced in M.Sc. Semester IV. The dissertation is incorporated with the aim to inculcate research acumen in students. As Biochemistry is an interdisciplinary subject, the papers like Instrumentation and methodology, biostatistics, Plant Biochemistry, Microbial biochemistry, etc. have been added.

In accordance with the UGC norms and the introduction of the Choice based Semester system, the syllabus was revised once again in March 2023.

These students will be able to pursue careers in pharmaceutical industries, research laboratories, clinical research organizations, schools, colleges and Universities.

BIOCHEMISTRY SYLLABUS

M. Sc.

Effective from June 2023

1. There shall be Four papers each of four hours (3+1) duration and two practicals each of Nine hours per week.
2. Each Course (Theory & Practical) shall carry 100 (Hundred) marks (Internal 30 marks and External 70 marks). The external exam for each theory is of 3 hours and the practical exam is of more than 6 hours per semester.
3. The major emphasis of this Course is to motivate students to improve through regular internal assessment. They should be encouraged to self-study and seminars according to the allotted times of the course per week.
4. Each theory paper is divided into four UNIT – s. Each UNIT – will have an equal weightage of teaching and setting question papers.
5. Question or its sub-question including the options will be set from the same UNIT –.
6. Practical batch will be consisting of a maximum of 10 students.
7. The elective papers will be offered as per the availability of the expert faculty and the feasibility of the department and schedule of teaching.
8. There shall be at least one study tour during the span of two years of P.G. study, pertaining to different Biochemistry/ Biotechnological/ Pharmaceutical industries/ research institutes/ various ecosystems, even outside Gujarat State. The study tour is highly essential for studying various concepts, processes, and technology pertaining to Molecular.

Gujarat University

Design and Structure of Biochemistry; PG Courses for Credit-Based Semester System

Department	Semester	Course		No. of Hours per week				Course credits
		No	Name	Lectures	Others	Practicals	Total

Examinations for the 4th semester

Dissertation

Internal Examination

70 marks are based on the day-to-day work of the concerned student in terms of experimental designing, Practical performance in the laboratory, interpretation of the results obtained, regularity, etc.

Internal 30 marks viva: Presentation of the work in front of the faculty of the department at least 3times during this project work as follows.

- (1) Deciding of the project and state-of-the-art presentation 10 marks
- (2) Discussion of the materials and methods and protocols..... 10 marks
- (3) Presentation of the obtained results 10 marks

External Examination

- (1) 200 marks examination of the dissertation by two examiners 100 marks each
- (2) 100 marks viva-voce conducted by examiners

Evaluation of seminars and assignments/ training reports/ study tour reports etc.

Internal: 50 marks for the presentation of the seminar which includes content, presentation slides, explanation, understanding of the topic, and response to the raised questions (10 marks each) External: 50 marks for evaluation of the prepared hard copy of the seminar and viva (marks distribution: 30 marks for viva and 20 marks for the report)

SEMESTER I

BCH 401: BIOENERGETICS AND INTERMEDIARY METABOLISM

UNIT 1: Bioenergetics/Energy and Thermodynamics

- Chemical bonds and Molecules: Forces within and between molecules, Concepts of internal energy, enthalpy, and entropy,
- First and second Law of thermodynamics, bioenergetics,
- Mitochondrial Respiratory Chain, Q cycle, ATP Synthetase Complex and Biological oxidations

UNIT 2: Biomolecules:

- Carbohydrate - Classification, Structure and properties of carbohydrates, Monosaccharides and related compounds, disaccharides, polysaccharides,
- Lipids – Classification, Structure and properties of fatty acids, triglycerides, Phospholipids and derivatives, Cholesterol and derivatives, Dietary fats, lipoproteins, biological functions of lipids.
- Structures, physical properties and functions of amino acids, Three-dimensional structure of protein, Protein denaturation and degradation

UNIT – 3 Intermediary Metabolism – I:

- Glycolysis, TCA cycle, pentose phosphate pathway and its regulation, (HMP Shunt), Gluconeogenesis,
- Biosynthesis of glycogen, starch,
- Regulation and function of metabolic pathway in energy generation Regulation of blood glucose homeostasis.

UNIT – 4 Intermediary Metabolism – II:

- Fatty acid biosynthesis: Acetyl CoA carboxylase, Fatty acid synthesis, desaturase and elongase
- Fatty acid oxidation: α , β & ω oxidation and lipoxidation, Different types of Lipid biosynthesis,
- Nucleic acids: metabolism of nucleic acid components, biosynthesis of nucleotides.

BCH 402: MICROBIAL BIOCHEMISTRY

UNIT – 1 : Introduction and Scope of Microbiology:

- Introduction to Microbiology and its various branches.
- The scopes and avenues of Microbiology.
- Historical developments in Microbiology :
- General characteristics of major group of Atypical Bacteria:
a) Rickettsia, b) Chlamydia, c) Mycoplasma, d) Actinomycetes, e) Archaeobacteria

UNIT – 2 : Microbial Phylogeny:

- Importance and systems of Classification
- Status of Microorganisms into kingdoms
- Basic principles of nomenclature and classification
- Criteria used for classification and identification of microorganisms
- Genetic approaches used for microbial taxonomy.
- Numerical Taxonomy; Bergey's Manual
- Present State of Bacterial, fungal and Viral taxonomy

UNIT – 3 : Characteristics of Microorganisms:

- *Staphylococcus* (Gram positive) and *Escherichia* (Gram negative) as model examples
- Moulds – *Rhizopus*, *Penicillium*, *Puccinia* as model examples
- Yeasts – *Saccharomyces* as model example

- Bacterial Viruses – Coliphage T₄ and Lamda phage as model examples; Animal Viruses – Adenovirus and Influenza virus as model examples; Plant Viruses – TMV as model example
- Gene Transfer Methods in Bacteria; Plasmids, Transposons,

UNIT – 4 : Microbial physiology:

- Principles of microbial nutrition:
 - Nutritional Classification and requirements of microorganisms
 - Nutritional classification of microorganisms
- An overview of Bacterial metabolism
- Microbial growth :
 - Growth in prokaryotes and modes of cell division
 - Normal growth curve of microbial population and Diauxic growth.
 - Continuous cultivation of microorganisms.
 - Methods for measurement of microbial growth.
 - Effect of environment on microorganisms
- Primary and Secondary metabolites produced by Microorganisms

BCH 403: MOLECULAR CELL BIOLOGY

UNIT – 1 Evolution of cell:

- Cell variability (size, shape, complexity, functions)
- Structural organization of prokaryotic and eukaryotic cells
- Molecular Basis of the Cell and Macromolecular recognition process
 - Cell - Cell interactions; Cell adhesions and cell junctions
 - Cell Cycle and Cell Division

UNIT – 2 Biomembrane and Cytoskeleton:

- Molecular organization of Biomembrane: Ultrastructure and molecular composition of membrane
- Physical and Dynamic properties of membrane
- Movement of molecules/ions across Biomembrane and Human perspective-defects in ion channels
- Cytoskeleton topography: Membrane Cytoskeleton interactions
- Microtubule and its dynamics, motor proteins
- Microfilament and its functions, Intermediate filaments and their functions

UNIT – 3 Cell organelles I:

- Molecular Organization and functions of: Endoplasmic reticulum,
- Golgi complex, Lysosomes and Lysosomal disorders
- Microbodies: Peroxisomes, Ribosomes.

UNIT – 4 Cell organelles II:

- Molecular Organization and Functions of Nucleus, Chromatin chemistry, Nucleolus
- Basic concept of cancer and Biology
- Characteristics of a cancer cell, Carcinogens and carcinogenesis
- Cancer Biomarker and metabolic Pathway.

BCH 404: STEM CELL BIOLOGY AND TOXICOLOGY

UNIT – 1 Developmental Biology:

- Gametogenesis, Fertilization, Embryo development
- Gastrulation; - Embryonic germ layer, tracking of Migrating cells
- Epithelial Mesenchymal interactions, Cell differentiation
- Cell ageing and Apoptosis

UNIT – 2 Basic Stem Cell Biology:

- Stem cell types, embryonic and adult stem cells
- Stem cell Isolation
- Stem cell characterization techniques
- Stem cell differentiation, induced pluripotency

UNIT – 3 Applied Stem Cell Biology:

- Autologous and allogenic stem cell transplantation: Therapeutic applications mesenchymal & hematopoietic stem cells
- Cryopreservation and stem cell banking
- Regulatory guidelines on stem cell therapy and research
- Stem Cell Therapy in Cardiac and Osteogenic regeneration, Stem Cell Therapy in Leukemia,

UNIT – 4 Animal Toxicology:

- General Principles and terminology
- Types of toxicity, Factors affecting toxicity,
- Acute, subacute and chronic toxicity,
- Classification of toxicants, Estimation of toxicity; LD₅₀; LC₅₀;

BCH 405 PR: Practical and viva voce based on BCH 401 & BCH 402

BCH 406 PR: Practical and viva voce based on BCH 403 & BCH 404

SEMESTER II**BCH 407: PLANT AND ENVIRONMENTAL BIOCHEMISTRY****UNIT – 1 Cell wall and Membrane Systems:**

- Cell Wall Structure, Compositions and Functions
- Plasmodesmata: Structure and Functions
- Plant Vacuole: Tonoplast Membrane; functions
- Plastids: Chloroplasts, Energetic, Molecular Organizations & Functions; Genome.

UNIT – 2 Plant Physiology: Growth and Development:

- Growth, development, concept, qualitative — quantitative changes
- Growth regulators, biosynthesis, bioassay, mechanism of action, physiological effects, applications (auxin, Cytokinin, gibberellins, ABA, ethylene)
- Physiological effects and role of Jasmonic acid, polyamines, Brassinosteroids, salicylic acid

UNIT – 3 Plant Breeding and Ethics:

- Plant breeding — objectives, origin, domestication, hybrid vigour
- Principles and methods of Plant Breeding, Self pollinated crops, Cross pollinated crops, Clonal crops
- Plant Introductions — NBPGR
- Plant Tissue Culture – Basics; Requirements, Techniques and application;

UNIT – 4 Environmental Chemistry:

- Ecological Factors: Soil, light, water etc, Principles of limiting factors; biotic factors
- Productivity: Ecosystem Organization: Structure and Function, Types, Energy Flow in Ecosystem, Food Chain & Web
- Biogeochemical cycles (C, N, P and S)
- Global Warming Causes and Impacts; Acid Rain and Green House Gases
- Sustainable Living Environments, Waste Management.

BCH 408: HUMAN PHYSIOLOGY

UNIT – 1 *Circulatory System:*

- Heart Beat, initiation, conduction and regulation
- Blood: Composition and function of plasma, erythrocytes including Hb, leukocytes and thrombocytes, plasma proteins in health and disease
- Blood coagulation — mechanism and regulation. Fibrinolysis.

UNIT – 2 *Respiratory System:*

- Physiology of nerve impulse conduction, excitability of membranes
- Transfer of blood gases- oxygen and carbon dioxide. Role of 2,3 DPG, Bohr effect and chloride shift
- Hydrogen ion homeostasis- Factors regulating blood pH — buffers, respiration and renal regulation. Acid-base balance- metabolic and respiratory acidosis and alkalosis.

UNIT – 3 *Digestive System:*

- Composition, functions and regulation of saliva, Gastric, Pancreatic, intestinal and bile secretions- digestion and absorption of carbohydrates, lipids, proteins, filtration, tubular re- absorption of vitamins.

UNIT – 4 *Excretory System:*

- Structure of nephron, formation of urine, glomerular filtration, tubular re-absorption of glucose, water and electrolytes — tubular secretion
- Regulation of water and electrolyte balance
- role of kidneys and hormones in their maintenance
- Role of Hormones, Signal transduction

BCH 409: ADVANCED ENZYMOLOGY

UNIT – 1 *Enzyme Kinetics – I:*

- Review of unisubstrate enzyme kinetics and factors affecting the rates of enzyme catalysed reactions
- Classification of multisubstrate reaction with examples of each class
- Kinetics of multisubstrate reactions.

UNIT – 2 *Enzyme Kinetics – II:*

- Method of examining enzyme-substrate complexes
- Methodology for measuring kinetic and rate constants of enzymic reaction and their magnitudes
- Enzyme turnover and methods employed to measure turnover of enzymes
- Significance of enzymes turnover.

UNIT – 3 *Immobilized Enzymes:*

- Protein-Ligand binding, including measurement, analysis of binding isotherms
- Co-operativity phenomenon. Hill and Scatchard plots
- Allosteric enzymes, Sigmoidal kinetics and their physiological significance
- Immobilized enzymes and their industrial applications

UNIT – 4 *Enzyme Regulation:*

- Multienzyme system: Occurrence, isolation and their properties, Polygenic nature of Multienzyme systems.
- Co-enzymes and cofactors: Water soluble vitamins and their coenzymes. Metalloenzymes
- Enzyme regulation: general mechanisms of enzyme regulation: Feed Back Inhibition and Feed forward stimulation; Enzyme repression, induction and degradation, control of enzymic activity by product and substrates; Reversible covalent modification of enzymes; Mono-cyclic and cascade systems with specific examples.

BCH 410 : NUTRITIONAL AND CLINICAL BIOCHEMISTRY

UNIT – 1 *Chemistry of Nutrients:*

- Minerals: nutritional significance of dietary calcium, phosphorus, magnesium, iron, iodine, zinc and copper
- Vitamins: dietary sources, biochemical functions and specific deficiency disease associated with fat and water-soluble vitamins. Hypervitaminosis symptoms of fat soluble vitamins. Nutritional requirements during pregnancy, lactation and infants and children
- Basic Concepts: Composition of human body- Energy content of foods. Measurement of energy expenditure: Direct & indirect calorimetry - Definition of BMR and SDA and factors affecting these. Thermogenic effects of foods. Energy requirements of men and woman and factors affecting.

UNIT – 2 *Nutritional Biochemistry – I:*

- Protein Energy malnutrition (PEM): Aetiology, clinical features, metabolic disorders and management of Marasmus and Kwashiorkar disease
- Starvation: Techniques for the study of starvation. Protein metabolism in prolonged fasting. Protein sparing treatment during fasting. Basic concept of high protein, low caloric weight production diets. Obesity
- Enzymes and metabolites as Liver function indices; clinical tests for renal function
- Disorders of amino acid metabolism Phenylalaninemia, homocystineuria, tyrosinemia and related disorders, aminoacidurias
- Disorders of Purine and Pyrimidine metabolism, Anaemia

UNIT – 3 *Nutritional Biochemistry – II:*

- Clinical significance of lipids/lipoproteins, lipidosis
- Clinical inter-relation of lipids (sphingolipidosis, multiple sclerosis), lipoproteins and apolipoproteins
- Diagnosis tests for apolipoproteins, HDL-cholesterol, LDL-cholesterol and triglycerides disorders
- Enzymes and other tests of cardiac function
- Diabetes mellitus and related tests

UNIT – 4 *Clinical Nutrition:*

- Role of diet and nutrition in the prevention and treatment of disease
- dental caries, fluorosis, renal failure, hyperlipidemia
- Atherosclerosis and Rheumatic disorders
- inherited metabolic disorders: Phenyl ketonuria, maple syrup disease
- Homocystinuria, galactosemia, gout
- Diabetes insipidus and diabetes mellitus.

BCH 411 PR: Practical and viva voce based on BCH 407 & BCH 408

BCH 412 PR: Practical and viva voce based on BCH 409 & BCH 410

SEMESTER III

BCH 501: IMMUNOLOGY & IMMUNOTECHNOLOGY

UNIT – 1 *Basic Immunology – I:*

- History and Significance of immunology
- Immunity and its types,
- Immune System, Cell and Organs involved
- Complement System
- Cytokines and their significance
- Cancer and Immune response (Tumour Immunology)

UNIT – 2 *Basic Immunology – II:*

- Antigens: General properties, criteria for antigens, types of Antigens
- Antigenicity MHC, HLA complex
- Immunoglobulins: Basic structure and types
- Immunogenetics: Genetic basis of clonal selection and generation of antibody diversity
- In-vivo antigen-antibody interactions.

UNIT – 3 *Immunotechnology:*

- In vitro antigen-antibody reactions and diagnostic significance
- Agglutination tests
- Precipitation and Immunodiffusion Tests Radioimmunoassay
- IRMA, ELISA / ELISPOT, RAST
- Hybridoma technology applications of monoclonal antibodies
- Vaccines and Immunotherapy

UNIT – 4 *Dysfunction Immunity:*

- Hypersensitivity Reactions
- Tolerance and Autoimmunity; Autoimmune diseases
- Immunodeficiency and their consequences
- Transplantation immunology
- Hazards of vaccine

BCH 502: INSTRUMENTATION AND TECHNIQUES

UNIT – 1 *Analytical Biochemistry:*

- Basic Quantitative Biochemistry: Concept of pH, Dissociation and Ionization of acid and Base, pKa, Buffer and Buffering System, Henderson Hassel Balch equation, Dissociation of amino acids, Normality, Molarity and Molality.
- Automation In Clinical Biochemistry: Instrument concepts, Chemical reaction phase, Measurement approaches, Selection of instrument, Control of analytical variables, External and internal quality control measurements

UNIT – 2 *Separation Techniques:*

- General principles and applications of Adsorption chromatography
- Partition; ion-exchange chromatography; Thin-layer chromatography & HPTLC
- Molecular-sieve chromatography; Gas- liquid chromatography
- FPLC & UPLC, Affinity chromatography
- Preparative and Analytical Ultracentrifugation, Basic principles and types of Gel

UNIT – 3 *Analytical Techniques:*

- Beer-Lambert law, Types of emission spectra, light absorption and its transmittance and application of extinction coefficient
- application of visible and UV spectroscopic techniques (structure elucidation and numerical excluded)

- Electrophoresis, PAGE and SDS-PAGE, Two- dimensional electrophoresis and its importance
- Iso-electro-focussing; Immuno-electrophoresis,

UNIT – 4 *Radio-Isotopic and Non-Radioisotope Techniques:*

- Type of radio isotopes used in Biochemistry, Isotopes commonly used in biochemical studies: 32-P, 35-S, 4-C, and 125-I)
- Techniques used to measure radioactivity (gas ionization and liquid scintillation counting), Autoradiography
- Biological hazards of radiation and safety measures in handling radioisotopes, Biological applications
- Radioimmunoassay.
- Principle and application of Chemiluminescence in biomarker assessment

BCH 503: *BIostatISTICS, BIOinformatics, BIOinstrumentation AND BIOassays*

UNIT – 1: *Biostatistics:*

- Introduction, Sample and Sample techniques, Types and Presentation of Data, Concepts of population, Measures of central tendency: Mean, Mode and Median,
- Standard deviation and standard error, Basic of Probability theory and theory of distribution, Simple linear correlation and regression
- Tests of significance, ‘t’ test, ANOVA-one way and two way analysis
- Entrepreneurship and marketing - starting and managing an enterprise
- Entrepreneurship, advertising, marketing.

UNIT – 2: *Research Methodology & Bioinformatics:*

- Research methodology: Meaning, objectives and types of research, significance of research. Definition and identification of a research problem, justification, theory and hypothesis.
- Research design: Features of a good design, concepts of variables, experimental and control groups. Hypothesis testing, Interpretation: Meaning of interpretation and techniques. Interpretation of tables and figures. Reporting: Significance of report writing, steps in report writing and types of reports
- Introduction to Bioinformatics, Basic concepts of biological databases; Protein and Genome Information Resources, Computer in Life Sciences
- Structure prediction and quality assessment
- Virtual screening of drug molecules
- Molecular dynamic simulation

UNIT – 3: *Microscopy:*

- Principles, working and application of Bright field and Dark field
- Phase contrast and Interference, Differential Interference Contrast Microscope
- Fluorescence Microscopy; Immunofluorescence, Confocal Microscopy
- Specimen fixation, processing and staining in Light Microscopy
- Electron Microscopy; TEM, SEM, and STEM, Cryoelectron microscopy
- Processing of Biological sample for EM, Special Techniques in EM: Negative staining
- Shadow casting and Freeze fracture deep etch replication techniques;

UNIT – 4: *Bioinstrumentation & Bioassays in Drug discovery:*

- PCR & qRT-PCR
- Sanger sequencing (principle and clinical applications)
- Next generation sequencing (principle and clinical applications)
- Microarray (principle and clinical applications)
- Principle of MS and MALDI-TOF;
- Flow cytometry (principle and clinical applications)
- Viability and cytotoxicity assays (MTT, SRB etc); Functional assays
- In-vitro model for drug screening; In-vivo animal models

BCH 504EA: Elective – ADVANCED MOLECULAR BIOLOGY AND BIOTECHNOLOGY

UNIT-1 Nucleic acid and Eukaryotic genome

- Physical and chemical properties of nucleic acids (DNA & RNA)
- Isolation and separation techniques;
- Eukaryote genome and chromosome organization
- Eukaryotic gene structure

UNIT-2 Central Dogma and DNA repair

- Replication, Transcription, post transcriptional modifications, translation, post-translational modifications and regulation of gene expression
- DNA Damage & Repair

UNIT-3 Recombinant DNA Technology

- Methodology of creating a recombinant DNA molecule, splicing, properties of restriction endonucleases and their mode of action, selection/screening,
- construction of DNA library; Chemical synthesis of gene
- cloning vector (lambda phage, plasmid, M-13 phage, cosmid), shuffle vectors, yeast and viral vectors, expression vectors, uses of cloned gene, sub cloning,
- protein production in bacteria; antisense-RNA technology

UNIT-4 Proteomics

- Basics of Proteomics, Isolation, Purification and characterization of Proteins
- Protein Folding and basics of protein engineering
- Therapeutic proteins including Monoclonal antibodies
- Purification and application and of monoclonal antibodies.

BCH 504EB: Elective – MOLECULAR ONCOLOGY

UNIT – 1: Dynamics of Cell Growth:

- Cell cycle, Cell division -molecular aspects, mechanics, regulation
- Cell growth; Growth factors, Cell aggregation
- Cell ageing (senescence), Cell death, apoptosis, Autophagy

UNIT – 2: Cancer Biology – I:

- Normal and cancerous cells; Cancer Hallmarks
- Carcinogens and Carcinogenesis
- Cancer Biomarkers; Chromosomes and Cancer
- Oncogenes and tumour suppressor genes;
- Signal transduction pathways

UNIT – 3: Cancer Biology – II:

- Principle of cancer therapies, radiation, chemotherapy, immunotherapy and targeted therapy; Biological therapy
- Cancer stem cells, Drug resistance

UNIT – 4: Cancer drug discovery:

- Cancer drug targets identification and validation
- In-vitro screening
- In-vivo models in cancer
- Cancer clinical trials

BCH 505 PR : Practical and viva voce based on BCH 501 & BCH 502

BCH 506 PR : Practical and viva voce based on BCH 503 & BCH 504

SEMESTER IV

BCH 507PT: DISSERTATION/PROJECT WORK

Students are supposed to carry out field/laboratory training cum experimental work and prepare a comprehensive report along with a research proposal. The area should include basics to the latest developments and discoveries, which will impart broad training in various disciplines of Biochemistry and Biotechnology. These students will be able to pursue careers in pharmaceutical industries, research laboratories, clinical research organizations, schools, colleges, and Universities as researchers or academicians.

BCH 508S: SEMINARS / FIELD / INDUSTRIAL VISIT

Students should deliver seminars and attend the same on a regular basis topics on the syllabus, or recent advances in the subject and from the prepared review of research articles from research Journals. Students are also required to visit laboratories, research institutes, and industries for real exposure to the subject and qualitative interactions to understand the applications of the subject. If possible a study tour during the span of two years may be organized pertaining to different Biochemistry/Microbiological/ Biotechnological/ Pharmaceutical industries/ research institutes/ within or outside Gujarat State. The study tour is highly essential for studying various concepts, processes, and technology pertaining to Biochemistry and its advances.

BCH 509M: ASSIGNMENT AND GROUP DISCUSSION

The department will allocate the assignment from the subject and related areas to each student and arrange group discussions between students and also between faculties and students.
